REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the present claims recite a composition "consisting essentially of". The composition of Mardon et al further contains 900-1600ppm of oxygen. This is an intentional addition of oxygen, not an impurity content. Ferrari (US 4,778,648) discusses (see col. 1, lines 24-38) the effects of oxygen on alloys such as Zircaloy. Basically the oxygen increases strength, but does so at the cost of corrosion resistance. Applicant has demonstrated that even lacking the oxygen of Mardon et al, the present invention achieves sufficient strength, while maintaining the corrosion resistance. Therefore, oxygen is excluded from the present invention by the claim language "consisting essentially of". In addition, Applicant's declaration under 37 CFR 1.132 filed 23 June 2004 has shown that the combination of Sn and Fe must be above a minimum to achieve the improved corrosion resistance, while still keeping Sn to a lower amount to avoid deterioration of corrosion resistance. Thus, Applicant has demonstrated that the combination of a minimum amount of Sn and Fe combined against a maximum Sn amount leads to the unexpected result of improved corrosion resistance. Therefore, Applicant has overcome the rejections under 35 USC 103, based upon the unexpected results of improved corrosion resistance within the presently claimed narrow ranges. Each of independent claims 13, 19 and 27 recite this allowable subject matter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
